Discovery Projects

For the following projects, save the files you create in your Projects folder for Chapter 2. Create the files so they are well formed according to HTML 5. Be sure to validate the files with the W3C Markup Validation Service.

Discovery Project 2-1

Create a Book of the Month Club Web site. The home page should describe the current month's selection, including book title, author, publisher, ISBN number, and number of pages. Create separate Web pages for book selections in each of the last three months. Add links to the home page that open each of the three Web pages. Save the home page as **BookClub.html**, and save the Web pages for previous months using the name of the month.

Discovery Project 2-2

Create a Web site for a boat rental company. On the home page, describe the company and the types of boats it rents. Create separate Web pages for rental rates and reservations. On the rental rates page, list the types of boats available and their rental rates according to the length of the boat. Include rates for 1 day, 3 to 6 days, and 7 or more days. On the reservations page, include a mailto link that visitors can use to send a message that reserves a boat. Give visitors instructions on what types of information to include in their message, including the boat length, rental dates, and contact information. Save the home page as **BoatRentals.html**, the rental rates page as **Rates.html**, and the reservations page as **Reservations.html**.
